Applied Intelligence

What is New Relic

- New Relic is an observability platform that helps you build better software.
- You can bring in data from any digital source so that
  - you can fully understand your system,
  - analyze that data efficiently,
  - and respond to incidents before they become problems.

Monitoring

Servers

VMs

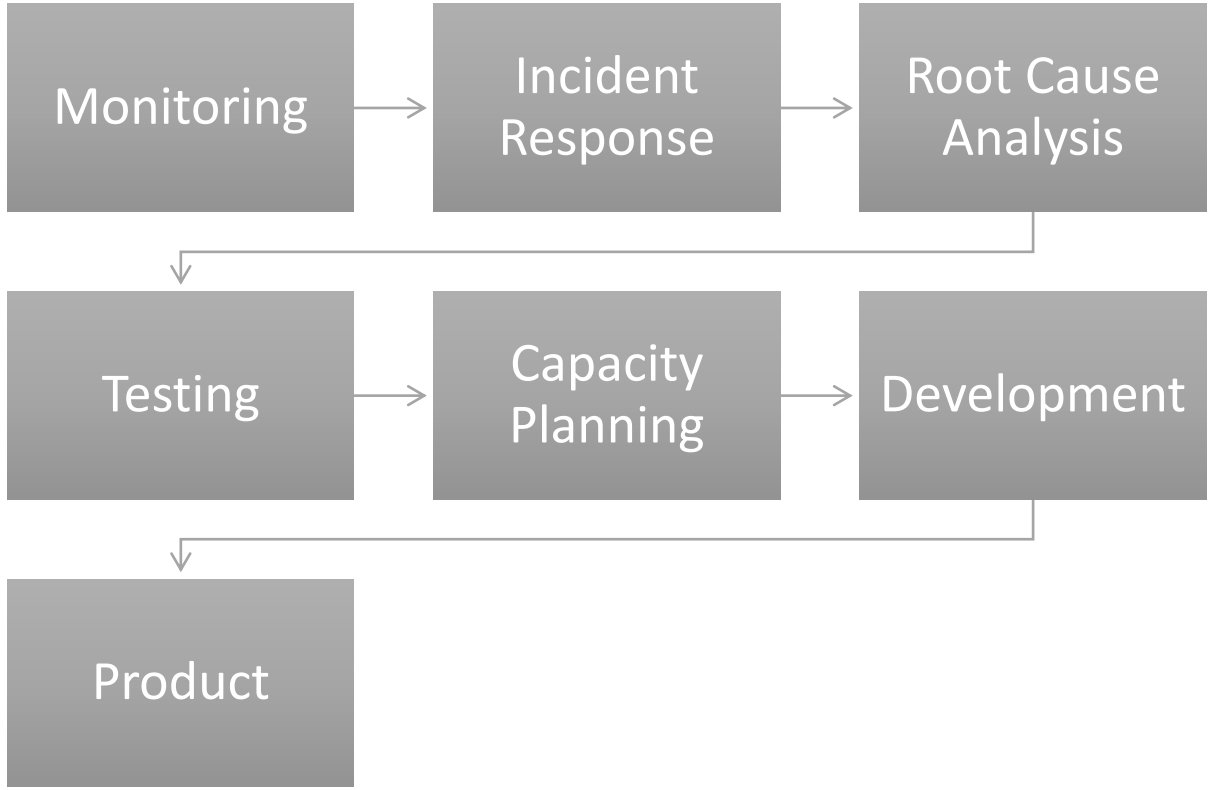

Applications

Logs

Traditional Model

Observability

- Superset of Monitoring, It Provides root cause and also suggestions for how to fix the problem.
- It Involves telemetry
  - Health checks
  - Metrics
  - Log Entries
  - Distributed end-to-end tracing

All these are involved in Telemetry

Telemetry

- It is the collection of measurements of data at remote points and automatic transmission to receiving equipment for monitoring.
- Measure remote terminals
  - Metrices
  - Events
  - Logs
  - Traces

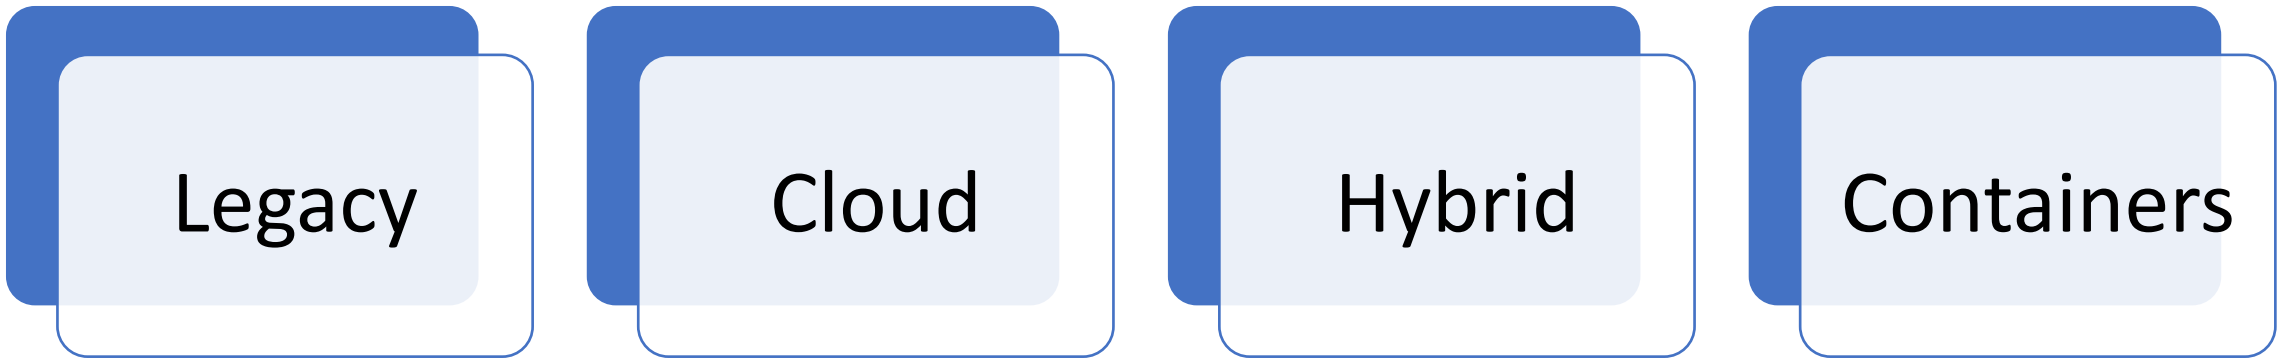

Observability

- Observability Includes
  - Logging
  - Monitoring
  - Tracing
  - Visualization

Platform Evolution

Architecture Evolution

Monolithic

Service Oriented

Microservices

Here comes New Relic

- Telemetry Data Platform (TDP)
- Full Stack Observability
- Applied Intelligence

Telemetry Data Platform (TDP)

- Open Data Ingest
- Alerting
- Data analysis
- Log Management
- Dashboards
- 300+ integrations
- custom application

Full Stack Observability

- Application Performance Monitoring
- Infrastructure
- Digital Experience
- Synthetics
- Serverless
- Logs in Context

Applied Intelligence

- Detect and explain anomalies
- Correlate alerts and incidents
- Reduce alert fatigue
- see why incidents are correlated
- Determine Root Cause Faster
- Integrate with existing workflows

Difference b/w New Relic and other Monitoring Tools

- Splunk
- Nagios
