# Hadith # 4

Ibn' Abbas reported, the Messenger of Allah peace be upon him said to a group of his companions:

"When you pass by the meadows of Paradise indulge freely in it!
They said: O Messenger of Allah! What are the meadows of Paradise?
He Said: The circles of "ilm."

# Functions in Python

So what is a function in python?

A function is a block of code that starts with the **def** keyword, followed by a name for the functions and a colon.

```
def a_function():
    print("we just created a function!")
```

© 2018 Al-Nafi. All Rights Reserved.

# An Empty function AKA the stub

```
def empty_function():
    pass
```

The pass statement is known as a null operation, which means that when pass is executed, nothing happens.

# Now adding arguments to a function

```
def add(a,b):
return a + b
```

Or

```
add(1,2)
```

Or

```
add(1)
```

© 2018 Al-Nafi. All Rights Reserved.

# Examples continued

```
add(a=2, b=3)

total = add(b=4, a=5)

print(total)
```

So what happens when we add c ?

```
add(c=5, d=2)
```
