Symmetric Encryption

Symmetric: This is a term used in cryptography to indicate that the same key is required to encrypt and decrypt. The word “symmetric” means “the same,” and we are obviously referring to the key that is required at both ends to encrypt and decrypt. Symmetric key cryptography has the fundamental problem of secure key distribution.

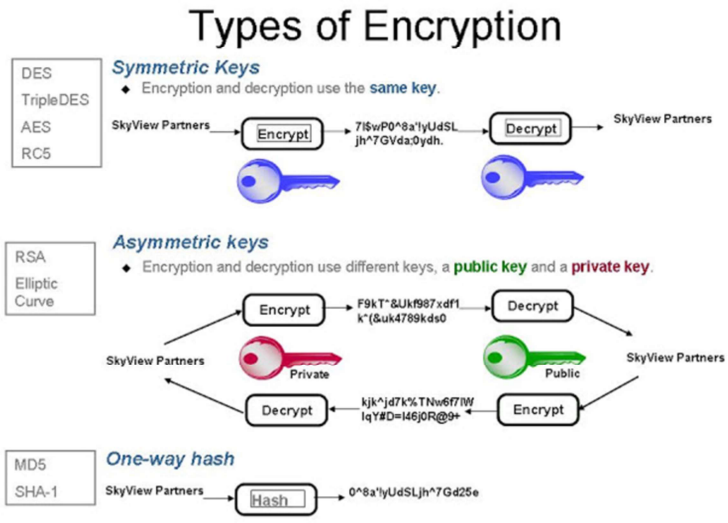

Asymmetric Encryption

Asymmetric: This word means “not the same.” This is a term used in cryptography in which two different but mathematically related keys are used where one key is used to encrypt and another is used to decrypt.
